GRINDING MACHINES

INDUSTRIAL GRINDER MACHINE

Our grinding machine has many outstanding features such as easy operation, convenient maintenance and cleaning, compact size, stable operation, high production capacity, low temperature production. Since the granule size is adjustable, it helps you to have time control and a flexible production line in mass production production lines.

ULIMAC GRINDING MACHINE FEATURES

The speed or capacity of the grinder depends on various factors such as the type of material, the size of the grinding chamber and blades, the quality of the blades used, the number of blades, the speed of the electric motor and the size of the sieve. Considering the combination of these factors also determines how quickly the regrind can be performed.

Products You Can Grind With The Grinding Machine

When legumes and spice products such as turmeric, ginger, genus, black pepper, tarhana, lentil, chickpea enter the grinding chamber, the rotating blades come into contact with the fixed blades that cut them into pieces. There is also a large sieve with many holes at the bottom. The cut products continue to be mixed and cut by the blades until they are small enough to fall out of their holes. Thus, by adjusting the size of the holes, you can control the product size very easily.

Grinding Machine Maintenance

Ulimac grinding machines are produced in a robust and durable manner without exception. However, it is essential to properly maintain your shredders to avoid expensive repairs or replacement of parts in the future.

First of all, it's important to protect the engine and routinely sharpen and turn fixed blades. This provides maximum grinding performance and less wear and tear on the machine.

Make sure to keep foreign, hard objects such as metal away during the process. Often overlooked objects such as nuts and bolts can separate the blades, breaking critical parts of the shredder and

causing serious damage. Therefore, care should be taken during the maintenance process.

Always pay attention to the grinder screen and make sure it does not clog during operation. A clogged grinder sieve prevents products from leaving the grinder, causing material to accumulate in the grinding chamber and block the machine. A stuck system can cause early wear of the machine and, in more severe cases, the electric motor to burn out.

With Ulimac Grinding Machines, You Have The Advantage

If you want to have an effective production of spices with the high quality and professional grinding machine, Ulimac Grinding Machines will never let you down. By having better production than your competitors, you will achieve the granule size you want. You can contact us through anytime for any questions you have in mind and for any technical issues you want to get answers to.
